

# SipStream Mobile

Uses a mobile network rather than a data connection for seamless integration

## Ideal for:

- Any mobile business requiring the legitimacy of a landline number
- Field based support personnel
- Warehouse operatives
- Remote workers with no fixed office location
- Office workers who go out to site from time to time

## What is it?

Customers across the UK already enjoy huge cost and flexibility benefits from using **SipStream**, our hosted Voice Over IP solution.

Now however, the reasons to move your voice to our cloud are even more compelling with the advent of **SipStream Mobile Sims**.

Now you can actually use any mobile phone as an extension to your office. Calls from office to mobile and mobile to office are completely free. Even better, your mobile device will enjoy all the benefits that your desk phone would have, such as Call Recording and Voicemail to Email.

**SipStream Mobile** uses a mobile network rather than running as an app on a data connection for higher quality of service and seamless integration.

## Key features

- Sim only - use any mobile you wish, including smartphones
- Mobile-to-office and office-to-mobile calls are free
- Call recording, hunt groups, voicemail to email, call logging, paging, call diversion, conference calls, call waiting
- Assign any one or more UK DDI (01, 02 numbers etc)
- Port existing mobile numbers, as well as landline numbers
- Tandem feature - rings your mobile and your deskphone simultaneously
- UK Roaming (auto switch to the operator with the best signal)
- Call, text & data packages available
- Present any number when calling
